

# Early Fusion

## With Collaboration - 2 agents

Training -Stage

Inference - Stage

First Frame

1-20 frames (20 S)

3DGS

Static Gaussian

RT-4DGS (Baseline)

GT -Pred - L2Loss

GT -Pred - L2Loss

RGB - CAV-2

Pose -CAV-1

RGB - Ego Car

Pose Ego Car

RGB - CAV-2

Pose -CAV-2

RGB - CAV-2

Pose -CAV-1

RGB - Ego Car

Pose Ego Car

RGB - CAV-2

Pose -CAV-2

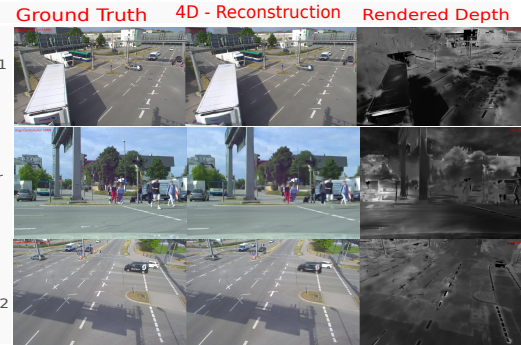

4DGS - Pointcloud

RT-4DGS (Baseline)

V2X Agent 1

Ego Car

V2X Agent 2

## Without Collaboration - Only Ego Car

Training -Stage

Inference - Stage

1-20 frames (20 S)

RT-4DGS (Baseline)

GT -Pred - L2Loss

Static Gaussian

RGB - Ego Car

Pose Ego Car

4DGS - Pointcloud

RT-4DGS (Baseline)

V2x Agent 1

V2X Agent 2

Ground Truth 4D - Reconstruction Rendered Depth

Assumption, a pre-trained static gaussian is already available in the car,

Dinov2 Feature Fusion

I dont know if i am rihgt here, Diffusion based gaussian iis very diifcult fr me now

## Dinov2 features - With Collaboration (2 agents)

Training Stage

Dino Features

Feature decoder

Static Gaussian

1-20 frames (20 S)

RT-4DGS (Baseline)

GT -Pred - L2Loss

CAV-1 FMAP

Pose -CAV-1

RGB - Ego Car

Pose Ego Car

CAV-2 FMAP

Pose -CAV-2

4DGS - Pointcloud

Stupid Idea - Dont know if would work or not, dont know how to make this work

Assumption, a pre-trained static gaussian is already available in the Ego car

Coding this is difficult,
